

## Visual ERP

### Integrate, Collaborate, Orchestrate with Ease

Visual PM ERP offers a new model, one of being a strategic partner with us. Our knowledge of what it takes to deliver solutions that drive business value. A borderless operating structure that makes working together to accomplish, facilitate across the company to get things done more efficiently, and you. Strategically you know your business together we can deliver the solutions to meet your needs and drive strategy.

- **Integrate:** Deliver a cohesive user experience across business systems
- **Collaborate:** Delivering the solutions that meet the needs internally and externally with a common mission
- **Orchestrate:** Measure business outcomes, quantify business value keeping company assets safe and secure.

There are many advantages to implementing an ERP solution. However, they can be summed up this way: To improved productivity, increase efficiencies, decrease costs, streamline processes, increase regulatory compliance and customer service.

Visual PM is designed for startups, growing business and medium sized companies. Our platform is a features rich environment that provides scalability, mobility, security and automates your business operations that allows end to end visibility while providing management with real-time data across the whole organization.

When combined with a 3<sup>rd</sup> party interactive desktop Point of Sale System (POS) with a Rewards program can form the hub of a dispersed multi-branch retail management system. Touchscreen or Keyboard, Scales and Printers, Online and Offline Visual PM ERP POS stays reliable even if your connection isn't and with our Proxy API Tool Kit your peripherals are supported with no setup required.

Based on the concept of double entry that revolutionized accounting, Visual PM ERP's inventory management isn't about consumption, loss or missing products; products are just moved from one location to another. This allows full traceability (from customer to supplier, not limited to your warehouse), advanced reporting (e.g. inventory valuation on manufacturing counter-parts locations) and a very simple user interface.

Get the right purchase proposition at the right time to reduce your inventory level. Improve your purchase and inventory performance with procurement rules depending on stock levels, logistic rules, sales orders, and forecasted manufacturing orders. Send requests for quotations or purchase orders to your supplier in one click. Get access to product receptions and invoices from your purchase order.
